

**AMENDMENTS TO THE CLAIMS**

In accordance with the PTO's amendment format, a detailed listing of all claims has been provided. A status identifier is provided for each claim in parentheses following each claim number. Changes to the claims are shown by strikethrough or double bracketing (for deleted text) or underlining (for added text).

**In the Claims:**

Claim 34 was previously pending.

No new claims are added.

No claims are canceled.

No claims are amendeded.

Claim 34 is currently pending.

**Listing of the Claims**

1-33. (canceled)

34. (Previously presented) One or more media containing instructions that, when executed in appliances that use embedded computing elements, perform the following steps:

receiving data from a graphical user interface program to determine properties of a display list in the graphical user interface, the display list having one or more display controls that are selectable by a user;

accessing a data source that contains one or more display list elements that are displayable in the display controls, a display control being able to display one display list element at a time;

populating each display control with a display list element from the data source according to one or more scrolling events received; wherein:

the graphical user interface program is configured independently of the one or more media,

a display state of the display controls is determined,

a list manager receives events from the display controls, and

the list manager forwards the events to the data source so that the data source can manage the display state beyond the lifetime of a display list element in a display control, and

wherein the instructions are executable on different computing platforms and in different applications to provide the display list.

35-36. (canceled)
